Keep your faxes running on the nbn™ without disruption

Future-proof your fax by making the switch to GoFax's easy-to-use, online faxing solution today.

The nbn™ rollout has caused major disruptions to fax machines and fax service providers across Australia. With many organisations reliant on faxing, ensure your business has a smooth transition onto the nbn™ with GoFax.

What you need to know about the affects of nbn™ on fax:

Fax services are based on legacy copper technology which transmits fax via the traditional telephone exchange. As nbn™ is transitioned across Australia, the traditional telephone exchange has become redundant and all future fax communications need to be transmitted online via the nbn™.

The most reliable way to continue sending and receiving fax is by using an ISDN business-grade online faxing service such as GoFax®.

How to use GoFax?

> Secure online portal: easy-to-use online dashboard to manage your entire fax communications

> Fax using email: use your existing email client to send and receive faxes

> GoFax app: Download the GoFax app to your mobile, tablet or desktop device for total convenience

> API Integration: provide your developers with API access to integrate with existing software and applications.
